Programming: **Major:** Javscript/ES6, Node, MongoDB, CSS/SASS • **Minor:** Python, Typescript

Software: Git, Postman, MongoDB Compass, SourceTree, MySQL Workbench, Slack

Systems: MacOS, WindowsOS, Unix, Linux

Professional Experience

Front End Software Developer • Louisville, CO
Gaia Inc. • Oct 2018 to Present

Develop brand design component library to improve efficiency of website and applications. Work with current project lead to improve library utilization.

- Create multiple implementations for front-end developers to use library, i.e. React components, SASS mixins and CSS classes.
- Added testing library Jest / Enzyme to create consistent component styles.
- Collaborate with lead designers regarding component styles. Use software (Zeplin) to follow designer specifications.
- Increase in efficiency allows developers to focus on more crucial elements of the web application, i.e. UX & UI.

Full Stack Project Manager • Denver, CO
Code for Denver • June 2018 to Present

Developing an updated version of Comrad software for a local radio station. Project includes updating layout / workflow for radio DJs as well as improving API performance for calendar events and music library searches.

- In charge of bringing product to market; includes showing projects alongside our community partners and networking with potential partners and investors.
- Onboard team members and assign tasks to match to their specialties and strengths.

- Structure code base to ensure consistency for pull requests.
- Create an open discussion environment by collaborating with project leads and team members.
- Using latest technologies such as React/Redux, Node.js/Express, Passport.js, Jest/Enzyme, MongoDB/Mongoose.

Front End Software Engineer • Centennial, CO
GroovyTek • June 2018 to Oct 2018

Collaborated with lead developer and CEOs on designing a CRM (client relation manager) for their current business using HTML5/CSS3. Started from scratch to help build a clean workflow and smooth user experience. Designed landing page for the company.

- Implemented Twitter Boostrap library for initial design and improved quality over time.
- Used technologies such as Gulp for automated tasks, i.e. compiling files for efficiency.
- Increased readability and produced reusable code by utilizing BEM methodology with SASS code.
- Increased client stewardship by assembling AJAX request for backend communication with email system.

Part Time Instructor / Lead Teaching Assistant • Denver, CO
University of Denver • June 2017 to Present

Teaching 6-month part-time bootcamp in various fields; courses include Full Stack Web Development and Cyber Security.

- Work with new instructors and assistants to teach them how classrooms operate; go over detailed instructions on the software used.
- Promote a dynamic and collaborative classroom community by encouraging student participation and team-based work.
- Ensure comprehensive knowledge of course material including MERN stack and basic cyber security software.
- Quality instruction that ensured 90% pass rate (throughout 5 cohorts).

Internal Business Consultant • Orlando, FL
Estate and Business Planning Group • Aug 2012 to Jan 2018

Supported financial advisor with over $100 million in assets by improving workflow and increasing business revenue. Managed schedule and case preparation to ensure client relationship success.

- Improved backend deficiency by introducing web-based workflow such as Constant Contact for emails and RedTail for data storage.
- Fostered and maintained excellent relationships with clients through unparalleled interpersonal skills.
- Learned complex finance language and logistics in short period of time.

Education

University of Central Florida: Orlando, FL • Full Stack Web Development – Certificate – April 2017

University of Central Florida: Orlando, FL • Bachelor of Science, Finance – August 2012
